

ABSTRACT

The invention relates to an organizer for complex categorizations. The development of computer science in general and the Internet in particular has led to an ever –increasing amount of information being made available to a large number of people, many of whom are not computer
5 experts. As a result, new and improved mechanisms are required in order to organize said information and facilitate searches. The invention relates specifically to a type of organization for sets of entities, such as for example, objects, concepts, ideas, terms or other entities, which facilitates the conceptualization of classifications and the implementation of searches. In particular, the invention facilitates the formation of systematic categorizations which contain
10 different criteria for organizing information, as well as facilitating the checking and use thereof by the user.
